

2022 NVIDIA CORPORATION ANNUAL REVIEW

NOTICE OF ANNUAL MEETING
PROXY STATEMENT
FORM 10-K

“NVIDIA PROVIDES THE CORE TECHNOLOGY RESHAPING INDUSTRY AND SOCIETY”

Diginomica

NVIDIA is a place where scientists, artists, creators, and adventurers can do their life's work. We take on tough problems where we can shape the world for the better, and where we can make a unique contribution. This has guided us into incredibly powerful technological forces and across the world's largest and most important industries.

NVIDIA's Earth-2 digital twin for
regional climate prediction.
Created in Omniverse.

“WITH ADVANCED
GAMING TECHNOLOGY
LIKE NVIDIA RTX, PC
GAMES CAN NOW LOOK
BETTER THAN THEY
EVER HAVE BEFORE”

PC Invasion

RTX is everywhere. More than 250 games and apps now use RTX to deliver stunning ray-traced graphics—including AAA blockbusters like *Cyberpunk 2077*, and digital creation apps like Autodesk 3ds Max, Blender, and the Epic Games' Unreal Engine. NVIDIA GeForce 30 Series GPUs deliver unmatched performance, from high-end rigs to incredibly thin and light laptops.

GEFORCE GPUs IN THE CLOUD

Not everyone has a cutting-edge gaming rig. With the GeForce NOW cloud gaming service, anyone with a computer or smartphone can rent NVIDIA's most powerful GPUs and play AAA games like *Fortnite* and *Marvel's Avengers*.

“NVIDIA UNLEASHES WORLD’S MOST POWERFUL AI HARDWARE YET”

Digital Trends

As companies process mountains of data to train and refine AI models, their data centers are essentially becoming AI factories. A whole new type of data center has emerged because of AI. At GTC 2022, NVIDIA unveiled a giant wave of products: the new Hopper GPU and Grace CPU Superchip, new networking technology, new systems, and new software products to power next-generation data centers.

“NVIDIA SOFTWARE HOLDS THE KEYS TO THE KINGDOM OF AI”

Forbes

AI is the most powerful technology force the world has ever known. NVIDIA AI brings together computer vision, conversational AI, recommender systems, avatars, robotics, and autonomous vehicles. These AI skills are state of the art, trained to be used in production, and used by more than 25,000 companies today.

NVIDIA cuOpt for planning optimization for delivery services.

Customer service assistant powered by NVIDIA Omniverse Avatar.

Conversational AI brings discussions with "Toy Jensen" to life.

NVIDIA Maxine transforms the online meeting experience.

“NVIDIA IS BUILDING A GIANT VIRTUAL METAVERSE OF THE WORLD, WITH DIGITAL TWINS OF CARS, CITIES, AND PEOPLE”

The Independent

Today's internet is 2D, and AI is cloud-based. The next phase will be 3D, with AI capabilities fused into the physical world. We created Omniverse to enable the next wave of AI, where AI and robotics touch our world. Omniverse uses physically accurate simulation and photorealistic graphics to bring digital twins to life—from cars, to factories, to cities, or even planet Earth.

“NVIDIA’S GTC PROVIDES A GLIMPSE AT A WORLD FULL OF AUTONOMOUS MACHINES”

Forbes

Everything that moves will someday be an autonomous machine. They’ll perceive their environment, reason, plan, and act. Whether it’s a physical robot assisting a factory worker, an autonomous car on the road, or the virtual robot on its dashboard, each has to make split-second decisions to do its job. The computation required is enormous, and the software is complex. NVIDIA Isaac brings robots to life. For autonomous cars, we have NVIDIA DRIVE. NVIDIA Omniverse is the simulation and training platform for both.

ROBOT ANYmal

ETH Zurich’s four-legged robot ANYmal learned to walk on two wheels in a matter of minutes. ANYmal was built with NVIDIA Jetson and trained with NVIDIA Isaac Gym.
